

# DESIGNED TO DOMINATE

### LATEST GENERATION **PRE-WORKOUT!**

**CONTAINS O.A.:** NO COMPLEX WITH AAKG, GAKIC AND L-ORNITHINE  
CREA-TRON (DOUBLE BUFFERED CREATIN)  
BCAA'S, GLYCINE AND CARNOSINE  
GUARANA, THEOBROMINE AND SIBERIAN GINSENG

**FOR:** EXPLOSIVE POWER  
ENORMOUS MUSCLE PUMPS  
LARGER MUSCLE VOLUME  
INTENSE FOCUS  
HIGHER ENERGY AND ENDURANCE  
FASTER RECOVERY

## THE PRESENTATION

NANOPROXIL® is presented in a classy design jar of 800 gram (40 days supply)

NANOPROXIL® is available with an incredible fruit punch flavour (powder for solution)

## THE SUGGESTIONS FOR USE

Take 1 scoop 30 to 40 minutes before training, dissolved in a glass of 300 ml of water or grape juice for an improved uptake.

NANOPROXIL® is an extremely powerful product: do NOT EXCEED THE RECOMMENDED dosages !

## INCREASE THE EFFECTIVENESS OF NANOPROXIL

### NANOX MASS STACK

EXUM MASS XXL (mass gainer)  
+ NANOPROXIL®

The 2 showpieces of NANOX NUTRICEUTICALS in the ULTIMATE MASS STACK for an EXTREME FAST GAIN IN MASS AND POWER

# NANO PROXIL®

(NO booster)

**The most powerful pre-workout energy and performance enhancer !**

## HIGHLIGHTS AND BENEFITS

- Promotes vasodilation
- Promotes nitric oxide production
- Promotes strength, endurance, recovery and muscle mass
- Supports work capacity
- Supports ATP production
- Promotes fast energy
- NO NEGATIVE SIDE EFFECTS compared to many classical NO boosters ( exhaustion, nervousity, insomnia )
- NO FALL BACK after the training, NO RUSH feeling, NO SHAKING ( no overdose of caffeine like many competitive brands )
- Officially allowed by the MOH ( EC ) NUT/PL/AS/1363/3
- Unique taste
- MAXIMAL INCREASE IN POWER and HIGH PUMP EFFECT

## THE ACTION OF NANOPROXIL®

Nanoproxil® is a revolutionary product combining **not less than 30 essential ingredients**. The product takes care of a dramatic increase of explosive power, provides a faster recuperation, a larger muscle volume and increased ATP production ( adenosine triphosphate ). Nanoproxil® will give you this incredible "PUMP" and will contribute to a higher training capacity and muscle building.

The composing elements mainly contribute to an increase of the NITRIC OXIDE balance in your

body, resulting in a fast vasodilation, increasing muscle blood circulation, a higher oxygenation and better access of support of all important nutritional elements, hormones and other elementary substances to the muscle tissue.

The activity of Nanoproxil® is based on some key elements which act complementary to each other and promotes at least 5 functional activities in your body.

### VNO<sup>2</sup> (Vasodilatating Nitric Oxide complex)

Nanoproxil® combines AAKG (L-Arginine Alpha Ketoglutarate), Gakic and L- Ornithin Gakic on its own is already a very powerful product, which significantly increases the total muscle work performed during intense sets of resistance training by at least 10% and fatigue resistance to about 28% (clinical study vs placebo). As a result the athlete will be able to train harder with more muscle endurance and less fatigue.

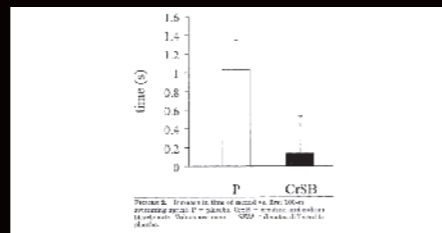

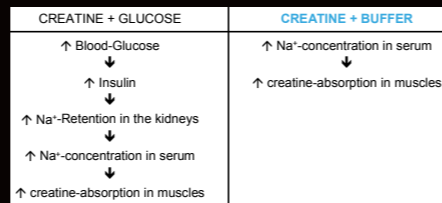

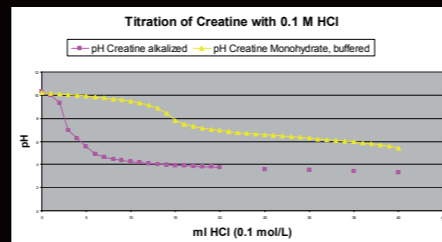

AAKG on its turn is one of the primary Nitric Oxide delivery sources present in Nanoproxil®. The product really boosts over a short term NO and Growth Hormone levels.

Ornithin and glutamine (for which Aakg is the main source) have anabolic effects and so contribute to build muscles and other tissues. At the same time they appear to have also anti-catabolic effects by blocking the effect of certain hormones, responsible for the breakdown of muscle tissue.

### CVF (Cell Volumizing Formula)

Nanoproxil® contains **CREA-TRONA®**, an exceptional rich blend of double buffered creatin, responsible for an increase of explosive force, a larger muscle – building capacity and a strongly increased ATP production .

### CREA-TRONA® THREE BIRDS WITH ONE STONE

### AEC (Anabolic Enhancement Complex)

In this compartment of Nanoproxil® an amount of BCAA's in the proper rate of 2:1:1 are presented. BCAA's makes up about 1/3rd of our muscles and play an important role in protein building.

Less known is that BCAA's also stimulate insulin production in three different ways. It has been demonstrated that BCAA supplementation in accordance with carbohydrate intake following resistance exercise increases insulin output by 221%. These facts suggest that taking additional BCAA with carbohydrates around ones workout will lead to a synergistic increase in glucose and amino acid uptake into skeletal muscle. Nanoproxil® contains a primary source of carbohydrates in its formulation (6,4 g maltodextrin and dextrose) given this premium energy fuel source to the product.

Nanoproxil® also contains Glycin, which plays a role in the production of hormones and helps building a strong immune system. Glycin is also capable to promote energy for the building of muscular cells.

Beta-Alanyl-L-Histidine or carnosin is highly concentrated in muscle and brain tissue. Carnosin is a well known radical oxygen scavenger and so one of the primary sources of muscle protection against free radical induced damage and oxygenated stress. Carnosin is protecting your muscles from damage during training where high oxidative stress levels may occur.

### TIS (Thermogenic Induction System)

This section will offer you a premium source of Caffein and Theobromin. Both substances are responsible for a diuretic, vasodilatation and myocard stimulating effect. Both substances are true ergogenic components, increasing the capacity of mental and physical labour.

Glucuronolactone fights fatigue and produces a sense of well being. It is also known to evacuate toxic substances.

Siberian ginseng is an adaptogenic plant and has a wide range of health benefits:

- increased endurance
- memory improvement
- anti-inflammatory
- immunogenic
- chemoprotective

Tyrosine finally increases stress resistance.

### INSUVOL (insuline enhancement formula)

In the above section we already demonstrated that Nanoproxil® contains different insulin enhancing factors (Ornithin, BCAA's). Nanoproxil® also contains GPA (Guanidinopropionic acid) and R-alpha Lipoic acid.

GPA helps to regulate insulin function, promotes weight loss, improves the muscle's ability to contract, increases creatin uptake and helps your muscle's to appear more prominent. GPA is certainly one of the most complementary products to creatin.

R-alpha lipoic acid serves as a coenzyme in the energy production process in the muscle cells which can provide quick bursts of energy. Alpha Lipoic Acid also contributes to invigorating mental and physical energy and a reduction in muscle fatigue.

# UNLEASH YOUR INNER BEAST

THE MOST POWERFUL OF ALL N.O. SUPPLEMENTS

## THE COMPOSITION

NUTRITIONAL VALUES		
	Per dose of 20 g	Per 100 g
Energy	74,8 kcal	374,1 kcal
Carbohydrates	6,94 g	34,7 g
Proteins	11,63 g	58,15 g
Lipids	0,06 g	0,30 g
Cacao extract	460 mg	2300 mg
Guarana extract	300 mg	1500 mg
Siberian Ginseng extract	100 mg	500 mg

VNO <sup>2</sup> (Vasodilatating Nitric Oxide complex)
Maltodextrin
Dextrose
Di-Sodium Phosphate
Di-Potassium Phosphate
Di-Calcium Phosphate
L-Arginine-Hydrochloride
L-Arginine-Alpha-Ketoglutarate (1:1)
Gakic
Histidine
Citruline malate
L-Ornithin
Nicotinamide Adenine Dinucleotide
CVF (Cell Volumizing Formula)
Crea – Trona (double buffered creatin monohydrate)
Taurine
Trimethylglycine
AEC (Anabolic Enhancement Complex)
Glycine
Leucine
Isoleucine
Valine
Beta-Alanyl-L-Histidine
TIS (Thermogenic Induction System)
Tyrosine
Guarana extract
Glucuronolactone
Theobroma extract
Siberian Ginseng
INSUVOL (insuline enhancement formula)
Guanidinopropionic Acid (GPA)
R-Alpha Lipoic Acid
